

# Turning Ambition into Action

## Envirotainer's journey towards a more sustainable cold chain

Envirotainer is transforming the pharmaceutical supply chain by ensuring the safe, reliable transport of temperature-sensitive medicines around the world. With cutting-edge cold chain solutions, we serve the full pharmaceutical lifecycle - from R&D and clinical trials to global commercial distribution - across all temperature ranges and shipment volumes.

For over 40 years, we've combined innovation, service excellence, and global reach to support pharmaceutical manufacturers in delivering life-saving treatments safely to patients. In 2024, we expanded our portfolio through the acquisition of another leading packaging provider, reinforcing our global presence and commitment to delivering more value to customers. Throughout our growth, one priority has remained constant: progress should not come at the expense of sustainability.

### Scaling Sustainably in a Demanding Global Market

As Envirotainer scaled our operations and product offering, we knew growth had to align with climate responsibility. Operating in a complex global logistics environment meant we needed to embed sustainability into our business without compromising quality, performance, or compliance. Stakeholders increasingly demanded transparency and accountability from their partners, and we were determined to lead with a credible, science-based climate strategy.

That's where South Pole came in: to help turn ambition into action.

# Advancing Sustainability With Purpose and Precision

## Evolving with Global Sustainability Standards

With guidance from South Pole, Envirotainer aligned its strategy to meet rising regulatory and stakeholder expectations, including the EU's Corporate Sustainability Reporting Directive (CSRD).

A thorough gap analysis, combined with a robust double materiality assessment, provided a clear understanding of our business's environmental and social impacts. This process helped identify key sustainability risks and opportunities across operations. South Pole's digital platform, Luumo, played a crucial role by streamlining data collection and enhancing our readiness for reporting, making it easier to keep pace with evolving standards.

As a result, Envirotainer is now well-positioned to meet regulatory requirements with consistency and credibility while steadily advancing toward our net zero goals.

## Setting Ambitious Climate Goals

To strengthen Envirotainer's long-term roadmap, South Pole helped define and secure validation of our ambitious science-based targets (SBT's), including one of the industry's most progressive scope 3 reduction goals. This was done through modelling various SBT scenarios to help us to understand the potential impact these targets would have. As a result, the targets set are deeply embedded within the organization, and the plan to achieve them is well-detailed.

Because we believe in leading by example, we are the only packaging solution provider with net-zero targets, committing to reach net-zero GHG emissions across the value chain by 2050 from a 2023 base year.

Find out how we are driving real impact across our operations and value chain in our [2024 Sustainability Report](#).

### Scope 1 & 2

Near-term: Reduce absolute scope 1 and 2 GHG emissions 42% by 2030 from a 2023 base year.

Long-term: Reduce absolute scope 1 and 2 GHG emissions 90% by 2050 from a 2023 base year.

### Scope 3

Near-term: Reduce scope 3 GHG emissions from purchased goods and services and upstream transportation and distribution 51.6% per thousand SEK value added from a 2023 base year, by 2030.

Long-term: Reduce scope 3 GHG emissions from purchased goods and services and upstream transportation and distribution 97% per thousand SEK value added from a 2023 base year, by 2050.

## Promoting Data and Transparency

Our commitment to transparency and data-driven decision making is key to building credibility and trust. Working with South Pole, we have implemented Microsoft Sustainability Manager, a powerful AI-enabled platform to monitor, measure, and manage our environmental impact across business units in real time. This platform automates data collection and visualization, allowing us to track our decarbonization journey with precision and ensuring that we are on track to meet our sustainability goals effectively.

Additionally, we conduct full lifecycle assessments (LCAs) for all products - evaluating environmental impact from raw material sourcing to end-of-life. Armed with these insights, we can design more sustainable solutions and empower our customers with the data needed to make informed decisions to advance their own ESG goals.

Beyond this, we have developed our communication strategy and stakeholder engagement with the support of South Pole, ensuring that we are able to communicate complex data clearly and effectively to the industry - avoiding greenwashing and reinforcing our leadership in environmental responsibility. Our collaboration has resulted in high-quality ESG reporting that is transparent, data-rich, and aligned with global reporting standards.

By embedding data-driven transparency into our sustainability strategy, Envirotainer is striving to improve accountability in the cold chain industry. We believe true sustainability demands clarity, honesty, and collaboration - and we're committed to delivering exactly that.

## Committing to ESG and Patient Safety

We understand that sustainability goes far beyond environmental responsibility - it's also about people. That's why the societal dimension of ESG is deeply embedded in our mission of enabling global access to pharmaceuticals.

Around the world, millions of patients depend on medicines that require precise temperature control. Any deviation during transport can compromise product integrity, reduce efficacy, and ultimately put patient lives at risk. That's why our solutions are engineered with uncompromising quality and reliability, helping pharmaceutical manufacturers deliver life-saving treatments safely and consistently - regardless of geography, climate, or infrastructure challenges.

Our impact is especially critical in underserved or remote regions, where healthcare access is already limited and the margin for error is even smaller. By minimizing temperature excursions and maximizing delivery reliability, we help extend the reach of vital therapies, from vaccines to biologics, to patients who need them most.

“

At Envirotainer, we believe true leadership means turning ambition into action. Our collaboration with South Pole has been instrumental in embedding sustainability at the core of our business strategy, because this is how we deliver long-term value for our customers, safeguard patient health, and advance the resilience of the global pharmaceutical supply chain. Our journey to net zero is well underway, and we're proud to be setting the pace for the industry.

**Niklas Adamsson**  
Chief Executive Officer (Interim)  
Envirotainer

“

Our partnership with South Pole has empowered us to take meaningful steps toward reducing our carbon footprint and reaching our climate goals.

They have also strengthened our internal capabilities, challenging us to grow, equipping our teams with the right tools and training, and ensuring we can sustain this work independently.

Together, we're building more than a successful partnership - we're shaping a more sustainable and resilient future for global healthcare.

**Nadja Lourenço**  
Head of Sustainability & Governance  
Envirotainer

“

Envirotainer has demonstrated a strong commitment to advancing its climate and sustainability agenda. Our partnership has supported them in becoming both more ambitious and more deliberate in their climate journey. By working together to help establish their robust greenhouse gas inventory, set ambitious targets, and develop clear pathways to achieve them, Envirotainer has laid a solid foundation for long-term impact. What's been especially encouraging is the level of engagement across the organisation, with teams actively building the capabilities needed to embed this work into day-to-day operations. Their proactive approach to regulatory preparedness and transparent communication reflects a clear sense of direction and accountability.

**Marco Suter**  
Senior Managing Consultant  
South Pole

### Conclusion: Driving Climate Impact with Confidence

Through working with South Pole, we have ensured that sustainability isn't viewed as a side initiative, but is embedded in our business strategy, our operations, and our culture. We lead by example, combining industry-leading performance with strong sustainability commitments that position us at the forefront of responsible cold chain logistics.

Our partnership with South Pole has been transformative, accelerating our organization-wide understanding of sustainability and elevating engagement at every level - from frontline teams to executive leadership. We now have a clear roadmap forward, underpinned by validated science-based targets, and a company-wide commitment to achieving them.

We're already seeing the results. Our efforts are delivering tangible impact, including measurable

reductions in greenhouse gas emissions in 2024, allowing us to scale with confidence - driving value for customers while reducing our environmental footprint.

As the pharmaceutical industry moves toward a more climate-conscious future, Envirotainer is proud to be a trusted, strategic partner on the journey to net zero - offering both the capability and the credibility to help our customers meet their own sustainability goals.

## Ready to Take the Next Step in Your Sustainability Journey?

Envirotainer is here to support you in achieving your sustainability goals. Join us in making a positive impact on the environment while ensuring the safe transport of pharmaceuticals.

### About Envirotainer

Envirotainer transports life-saving pharmaceuticals globally with innovative temperature-controlled solutions. We have led the industry for 40 years and offer the widest choice of cold chain solutions. Our shipment monitoring services backed by our extensive global network get your product to where it needs to be, precisely when it needs to be there.

We ensure the safety and efficacy of medicines for the pharmaceutical life cycle, from R&D all the way to commercial distribution, and our ambitious science-based targets help us reduce not only our emissions but our customers', too.

### About South Pole

South Pole is the world's leading carbon asset developer and climate consultancy. Since 2006, South Pole has been a trusted partner and advisor to governments, public sector organisations, and leading businesses on their decarbonisation journeys. South Pole serves over 1,000 clients across the world, and its global team of experts has helped many Fortune 500 businesses implement comprehensive strategies that help build resilience and turn climate action into long-term business opportunities. In line with its mission to deliver true climate impact for all, South Pole has used the power of markets to help channel climate finance to over 850 projects in more than 50 countries across the globe.
